CLAIMS

What is claimed is:

1	1.	A method for processing requests for delivery of electronic content, comprising
2		the computer-implemented steps of:
3		receiving at a server on a local network, a request for delivery to a destination
4		client that is not on the local network, of electronic content that is
5		associated with the local network, wherein the electronic content includes
6		one or more links that are only resolvable within said local network;
7		retrieving the electronic content from within the local network;
8		generating updated content by modifying the one or more links associated with the
9		electronic content to include information identifying said server; and
10		delivering said updated content to said destination client.
